INTRODUCTION

This report is the 57th in the series of <u>Juvenile Court Statistics</u>. Inaugurated in 1926 by the Children's Bureau of the United States Department of Labor, the series is the oldest continuous source of information on the juvenile courts' processing of delinquent and dependent youth. During its history, the series has undergone modifications in objectives, reporting procedures, and content. In 1923 a committee of the National Probation Association outlined the early purposes of the Juvenile Court Statistics project, as follows:

- 1. To furnish an index of the general nature and extent of the problems brought before the juvenile courts;
- 2. To show the extent and nature of service given by courts in such a way that significant trends in methods of treatment and in scope and volume of juvenile court work would be brought out;
- To point out significant factors contributing to the problems coming before the courts in order to throw light on possibilities of correction and prevention; and
- 4. To show the extent to which service given by courts has been effective in correcting social problems.

Initially, the annual reports included information and analyzed trends on factors such as gender, race, home conditions, reason referred, place of detention care, and disposition. Beginning in 1952, the information requested from juvenile courts became limited to a summary count of delinquency, dependency/neglect, and special proceedings cases handled with or without the filing of a petition. These reports combined traffic cases with delinquency cases; not until 1958 were traffic cases identified separately. Later, variations in juvenile court jurisdiction over traffic cases and frequent changes in laws affecting this jurisdiction made it difficult to determine national trends. Therefore, beginning in 1970, the report excluded ordinary traffic cases and, for similar reasons, beginning in 1975 excluded special proceedings. At present, the primary purpose of the <u>Juvenile Court Statistics</u> series is to provide a general overview of the delinquency and dependency/neglect workloads of the nation's juvenile courts.

For nearly 40 years, the Department of Health, Education and Welfare (HEW) had gathered data annually under its National Juvenile Court Statistical Reporting System program. Following the passage of the Juvenile Justice and Delinquency Prevention Act of 1974, the Law Enforcement Assistance Administration (LEAA) was delegated primary responsibility for juvenile delinquency activities at the federal level. Since the HEW reporting system was the only source of nationwide information on court

Perlman, I. R., Juvenile Court Statistics, <u>Juvenile Court Judges Journal</u>, 1965, <u>16</u>, 73-75.

handling of juveniles, the Department of Justice decided to continue the reporting effort. Under the provisions of a grant awarded by LEAA in 1975, and subsequent grants of the Office of Juvenile Justice and Delinquency Prevention (OJJDP), the National Center for Juvenile Justice (NCJJ) has been responsible for the collection and dissemination of all available juvenile court statistical information. It was agreed that NCJJ would continue using HEW methods for the <u>Juvenile Court Statistics</u> series to insure reporting continuity and to investigate procedures for improving the quality of nationwide reporting.

In collecting summary statistics for the <u>Juvenile Court Statistics</u> series, NCJJ became aware of the detailed case-level data routinely collected by juvenile courts across the country. Many juvenile court systems maintain automated records on each case processed, records containing such information as the age, gender, and race of the youth involved, the source of and reason(s) for referral to court intake, and information on detention, adjudication, and case disposition. (For 1983 over 600,000 of these automated case records were supplied to NCJJ.) The available data files are analyzed to generate the summary figures found in the <u>Juvenile Court Statistics</u> series. A companion series, <u>Delinquency in the United States</u>, was inaugurated in 1978 to utilize the detailed information stored in these automated data files and to return, in many ways, to the original reporting goals established in 1923. This series describes in great detail both the volume and characteristics of the delinquency and status offense cases processed by the juvenile courts annually, moving well beyond the simple summary statistics displayed in the <u>Juvenile Court Statistics</u> series.

As an outgrowth of this work, NCJJ now maintains the National Juvenile Court Data Archive which stores, analyzes upon request, and makes accessible all available summary and automated case-level data collected by the nation's juvenile courts. Summary data files (containing counts of the number of male and female, petitioned and nonpetitioned, delinquency, status and dependency/neglect cases processed within a court annually) are provided to the Inter-university Consortium for Political and Social Research at the University of Michigan for general dissemination. However, the automated case-level data files, which are often supplied to NCJJ under restricted-use agreements, are housed only in the archive. With the prior permission of the data suppliers, archived data files can be copied and shipped for detailed Selected files can be merged for cross-jurisdictional and/or longitudinal analyses with the assistance of NCJJ staff. Or, if requested, analyses can be designed and performed by NCJJ staff to meet specific needs and answer specific questions. The National Juvenile Court Data Archive is unique in the field of juvenile justice and has become the major source of information on the processing of youth by the nation's juvenile courts. The hope is that the juvenile justice community will mine the information housed in the archive to increase understanding of the juvenile courts and to improve treatment for juvenile offenders.

The project team expresses its appreciation to the individuals and organizations from the reporting jurisdictions who honored our request for data, the Office of Juvenile Justice and Delinquency Prevention and Barbara Allen-Hagen, grant monitor, for their support of the effort, and Lori Hoaq who prepared this document.

CHARACTERISTICS AND LIMITATIONS OF JUVENILE COURT STATISTICS

The reader must be cautious when interpreting the findings of this report. Lack of understanding can lead to erroneous conclusions. The following brief discussion is intended to decrease the errors users may make in interpreting this information.

The unit of count in this report is the 'case disposed.' In the Appendix, the available workload statistics for some jurisdictions employ other units of count which are identified in the accompanying footnotes. But all national estimates were developed in terms of cases disposed. Each case represents a child referred to the juvenile court on a new referral for delinquency or dependency/neglect. Consequently, one child can be involved in a number of cases within a calendar year. Each referral may contain one or more charges (offenses). A case is disposed when, after assessing the situation, some definite action is taken or some treatment plan is decided upon or begun. The 'case disposed' was selected as the unit of count because it is believed to provide the best measure of the volume of juvenile court activity. Therefore, one should not interpret national estimates as either the number of children processed by the court, the number of offenses referred, the number of dispositions rendered, or any other of the various possible units of count.

Most of all, the national estimates of juvenile court activity do not constitute a measure of the extent of delinquent behavior or the problems of child abuse, neglect, and dependency in this country or of the official system's reaction to them. Many children whose conduct is contrary to law are never apprehended, and many incidents of abuse and neglect are hidden from the eyes of courts and social agencies. Even when children are apprehended for a law violating act or identified as victims of abuse and neglect, police, school authorities, or other social agencies may divert cases for treatment outside of the juvenile court system. For example, the FBI's Crime in the United States - 1983 reported that only 58 percent of individuals arrested under the age of 18 were referred to juvenile courts. Therefore, the figures presented in this report are an estimate of the delinquency and dependency/neglect workloads of the nation's juvenile courts in 1983.

The Appendix of this report is the compilation of county and state juvenile court workload statistics. This aggregation of individual court and state workload figures may encourage comparisons between different jurisdictions for the reporting year, and (if previous reports are available) individual courts over time. However, readers are cautioned not to draw comparisons based on these summary figures alone. There are wide variations in the responsibilities and problems individual courts face. For example, some courts have jurisdiction over all children below the age of 18 while, in others, many of these youth fall under the jurisdiction of the adult (criminal) justice system. Geographical, economic, sociological, and judicial characteristics of the court influence the quantity and nature of cases coming before it. These factors must be carefully considered before attempting comparisons.

DEFINITION OF TERMS

This section lists definitions of the terms used in this report. Although the terms are not unique to this report, their definitions may be and, therefore, readers are encouraged to study the definitions carefully before proceeding.

UPPER AGE OF JURISDICTION is the age at which a juvenile court no longer has original jurisdiction over an individual for law-violating behavior. In 1983 in three states (Connecticut, New York, and North Carolina) the upper age of jurisdiction was 16, in eight states (Georgia, Illinois, Louisiana, Massachusetts, Michigan, Missouri, South Carolina, and Texas) the upper age of jurisdiction was 17, in Wyoming it was 19, and in the remaining 38 states and the District of Columbia the upper age of jurisdiction was 18.

DELINQUENCY CASE RATE is the number of delinquency cases disposed per 1,000 children 10 through 17 years of age and is used throughout the report, except in the Appendix. In the Appendix delinquency case rates are calculated using the delinquency child population rather than the 10 through 17 years of age figure.

DELINQUENCY CASES are those referred to juvenile court for acts defined in state statutes as a violation of a state law or municipal ordinance by children or youth within the age of juvenile court jurisdiction or for conduct so seriously antisocial as to interfere with the rights of others or to menace the welfare of the delinquent child or the community. This definition of delinquency includes status offenses, conduct which violates the law only when committed by a child, such as truancy, ungovernable behavior, and running away. Excluded from this report are the following: (1) ordinary traffic cases handled by juvenile courts, except those which are handled as "juvenile delinquency" cases because of their serious nature; (2) all adult cases in which the complaint is made against the adult, such as contributing to the delinquency of a minor, offenses against children, nonsupport, and the establishment of paternity; and (3) aid-to-families-with-dependent-children cases in which the court's administration of funds for and to dependent children is the only reason for court referral.

DELINQUENCY CHILD POPULATION is the number of children from age 10 to the upper age of jurisdiction. In all states, the upper age of jurisdiction is defined by statute. In most states, this is 18 years of age; therefore, for these states, the delinquency child population would equal the number of children who are 10 through 17 years of age living within the geographical area serviced by the court.

DEPENDENCY/NEGLECT CASE RATE is the number of dependency/neglect cases disposed per 1,000 children 0 through 17 years of age and is used throughout the report, except in the Appendix. In the Appendix dependency/neglect case rates are calculated using the dependency/neglect child population rather than the 0 through 17 years of age figure.

DEPENDENCY/NEGLECT CASES are those covering neglect or inadequate care on the part of the parents or guardians, such as lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents; abandonment or

desertion; abuse or cruel treatment; and improper or inadequate conditions in the home.

DEPENDENCY/NEGLECT CHILD POPULATION is the number of children from age 0 to the upper age of jurisdiction. Although the upper age of jurisdiction for delinquency and dependency/neglect cases may differ, this series bases both delinquency and dependency/neglect child population on the delinquency upper age of jurisdiction.

JUVENILE COURT is used in a broad sense to include all courts having jurisdiction in children's cases—that is, courts such as probate, domestic relations, and family courts in which juvenile jurisdiction is placed. "Juvenile court" also refers to all persons representing the court such as the judge, referee, and probation staff.

MANNER OF HANDLING classifies the processing of the case through the court system. Petitioned cases are those that appear on the official court calendar for adjudication by the judge or referee through the filing of a petition, affidavit, or other legal instrument used to initiate court action. Nonpetitioned cases are those cases which duly authorized court personnel screen for adjustment short of filing a formal petition or affidavit. Such personnel include judges, referees, probation officers, other officers of the court and/or an agency statutorily designated to conduct petition screening for the juvenile court. The "nonpetition" category includes cases which probation officers handle and cases petitioned but dropped or withdrawn prior to scheduling a formal hearing.

SIZE OF COUNTY, as used in the estimating procedure, is based on 1980 total population figures.

TYPE OF AREA is determined by the percentage of the total population which lives in an "urban" area as defined by the U.S. Bureau of the Census. The urban population comprises all persons living in: (a) places of 2,500 inhabitants or more incorporated as cities, boroughs (except in Alaska), villages and towns (except in the New England states, New York, and Wisconsin), but excludes persons living in rural portions of extended cities (i.e., cities whose boundaries have been extended, such as city/county consolidation to include sizable portions of territory that is rural in character); (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas (a central city or cities and surrounding closely settled territory) at the time of the 1980 census. For this report, to be classified as an "urban area," 70 percent or more of the total population must live in an urban area; to be classified as a "rural area," less than 30 percent of the total population must live in an urban area.

The classification of a county as being either "urban," "semi-urban," or "rural" is based on information developed by the U.S. Bureau of the Census during an analysis of their decennial census data. Therefore, a given county maintained its 1970 Census classification based on the description of its total population living in urban areas until the next decennial census. Throughout the 1970's the composition of the urban, semi-urban, and rural clusters of counties remained constant. But with the availability of the 1980 decennial census data, the urban character of each county was reassessed. Paralleling the general increase in the urban character of the nation

between 1970 and 1980, the reclassification resulted in an increase in the number of urban counties and a decrease in the number of semi-urban and rural counties. With this redistribution of counties, it is inappropriate to compare the number of cases handled within each type of area over time without considering the changing compositions of the area groupings.

UNIT OF COUNT is a case disposed by a juvenile court. Each case represents a child referred to the juvenile court on a new referral for delinquency or dependency/neglect. Each referral may contain one or more charges (offenses). A case is disposed when, after assessing the situation, some definite action is taken or some treatment plan is decided upon or begun.

SUMMARY OF FINDINGS

DELINQUENCY CASES

Courts with juvenile jurisdiction disposed an estimated 1,275,600 delinguency cases in Between 1957 and the mid-1970's delinquency caseloads increased from 440,000 to over 1.4 million cases annually (see Table 1 and Figure 1). From the mid-1970's through 1980 caseloads remained relatively constant, but began decreasing thereafter with the 1983 level the lowest since 1974. Changes in annual delinquency caseloads have to some extent paralleled the changes in the juvenile population in the United States. Some of the increase between 1957 and the mid-1970's and much of the decrease thereafter can be explained by these population trends. The impact of the changing youth population on the volume of delinquency cases handled by juvenile courts can be assessed through a study of delinquency case rates (see Table 1 and Figure 2). In 1983 the juvenile courts processed 43.5 delinquency cases for every 1,000 youth 10 through 17 years of age living in the United States. While the 1983 delinquency case rate was equal to the average rate of the previous seven years, during the 27-year period from 1957 through 1983 the rate of delinquency cases increased by 120 percent. Therefore, only a part of the overall increase in delinquency caseloads can be attributed to the growth in the youth population. As the growth pattern of delinquency case rates implies, juvenile courts in 1983 were seeing a larger percentage of the nation's youth for delinquency matters than were courts in the late 1950's; but in the years since the mid-1970's this proportion has remained relatively constant.

Males were involved in 77 percent of the delinquency cases the courts processed in 1983 (see Table 2). In 1983 for every 1,000 males 10 through 17 years of age in the general population, the juvenile courts handled 66 male cases compared to 21 female delinquency cases for every 1,000 females in the same age range. Between 1957 and 1983, the number of male cases increased by 174 percent while the number of cases involving females increased 260 percent. Once again, only a portion of these increases can be attributed to population growth. Differences between the male and female delinquency case rates decreased between 1957 and 1983; while both male and female rates increased, the increase in the female rate was proportionally greater.

In 1983, 63 percent of the delinquency child population lived in urban areas, 26 percent lived in semi-urban areas, and 11 percent in rural areas. In 1983 the courts in urban areas processed 69 percent of all delinquency cases while the courts in semi-urban and rural areas processed 24 percent and 7 percent respectively (see Table 3). The relative involvement of youth in urban, semi-urban and rural areas with their juvenile courts can be estimated by comparing their delinquency case rates (see Table 4). Results show that urban courts received delinquency cases at a greater rate than did juvenile courts in semi-urban areas and at a much greater rate than courts in rural areas. Therefore, it is reasonable to assume that courts in urban areas were handling a larger proportion of the youth living within their jurisdictions for delinquency matters than were courts in semi-urban areas and a much larger

proportion than courts in rural areas. Further analysis showed that the proportion of male and female cases handled in juvenile courts did not vary with area; so the variations in rates across areas were reflected in both male and female caseloads.

The procedures for handling delinquency referrals vary across jurisdictions and depend on court structure, administrative policies, and legislative criteria. However, in general, a referral is either handled formally by a judge through the filing of a petition or informally (without the filing of a petition) by an intake worker. In 1983 more than half of all delinquency cases were handled without the filing of a petition (see Table 5). Compared to semi-urban and rural areas, cases in urban areas were more likely to be handled formally. Cases involving males were more likely to be petitioned than female cases; 48 percent of all male cases were petitioned compared to only 36 percent of those involving females. Over the time period from 1957 through 1983, the probability increased that a delinquency case would be handled informally. The data show that between 1957 and 1983 the number of petitioned delinquency cases increased by 139 percent, while the number of nonpetitioned cases climbed 250 percent. While it was not possible to develop a definitive explanation from these data for the growing use of informal handling in delinquency cases, it is clear that the juvenile courts were diverting youthful offenders away from the more formal court processes.

DEPENDENCY AND NEGLECT CASES

Children can be referred to juvenile court because they may be dependent and/or the victims of abuse and neglect. Dependency/neglect cases involve charges against parents or guardians of neglect or inadequate care, abandonment or desertion, abuse or cruel treatment, or improper or inadequate conditions in the home. In 1983 courts having juvenile jurisdiction handled the largest number of dependency/neglect cases in their history; these courts disposed an estimated 196,200 dependency/neglect cases (see Table 6 and figure 3). A quick comparison of the delinquency and dependency/neglect caseloads shows that this figure is only a small fraction of the number of delinquency cases courts handled in 1983, which might imply that the juvenile court devotes less court time and resources to dependency/neglect matters. However, due to the nature of the dependency/neglect cases, periodic reviews over many years can commit the court to a long term involvement with a particular case, and the typical dependency/neglect case, in fact, consumes a larger amount of court time and resources than the typical delinquency case.

Between 1957 and 1983, dependency/neglect caseloads increased by 72 percent, much less than the 190 percent increase in delinquency caseloads (see Figure 4). But unlike the delinquency pattern, most of this variation can be attributed to the growth and decline in the youth population. The dependency/neglect case rate remained relatively constant from 1957 until the late 1970's when the rate of dependency/neglect cases brought before the juvenile courts began to increase (see Table 6 and Figure 5). In 1983 juvenile courts processed 3.07 dependency/neglect cases for every 1,000 children below the age of 18, the largest annual rate ever observed. Therefore, it appears that in the last few years the juvenile courts have been seeing a growing proportion of their youth population for dependency/neglect matters.

In 1983 juvenile courts handled slightly more female than male dependency/neglect cases. This roughly equal representation of males and females sharply contrasted the predominance of males in delinquency cases.

Table 7 contains estimates of the total number of dependency/neglect cases juvenile courts handled in urban, semi-urban and rural areas. Courts in urban areas processed 65 percent of all dependency/neglect cases in 1983, with semi-urban and rural areas handling 27 percent and 8 percent respectively. Within each area approximately 50 percent of dependency/neglect cases involved females. Dependency/neglect case rates in urban and semi-urban areas were equal in 1983, but the rural rate was about 37 percent less than the urban case rate (see Table 8).

In 1983 courts handled 71 percent of all dependency/neglect cases formally through the filing of a petition (see Table 9). Formal processing was more common in urban than non-urban areas. Within each area courts petitioned male cases as often as female cases. The finding that courts handled formally a much larger proportion of dependency/neglect cases than delinquency cases is consistent with the different roles many juvenile courts play in delinquency and dependency/neglect matters. In many jurisdictions, social service agencies, not the juvenile court, have the primary responsibility for handling abuse and neglect matters. In such jurisdictions, these agencies investigate reports of abuse and neglect and develop intervention programs with minimal, if any, court involvement. The juvenile court becomes involved in the case only when the nonjudicial procedure is inadequate and the situation requires the the strong intervention that only a court can provide (e.g., termination of parental rights).

Table 1: ESTIMATED NUMBER AND RATE OF DELINQUENCY CASE DISPOSITIONS: 1957-1983

| | | Child Population | |

| 1982 | 1,292,500 | 29,914,000 | 43.2 |
| 1983 | 1,275,600 | 29,345,000 | 43.5 |

- 1. Estimates for 1957-1969 are based on data from a national sample of juvenile courts. Estimates for 1970-1983 are based on data from all units reporting consistently for two consecutive years.
- 2. Based on estimates from the Bureau of the Census, U.S. Department of Commerce Current Population Reports, Population Estimates and Projections, Series P-25, No. 965, Issued March, 1985 and the data file entitled "County Population Estimates (Provisional) by Age, Sex and Race: 1980-1982 prepared in 1985." Also included are population figures for Puerto Rico and the Virgin Islands.
- 3. Rate is the number of delinquency cases per 1,000 children 10 through 17 years of age.

| 1983 | 876,200 | 69 | 306,700 | 24 | 92,700 | 7 |

1. The classification of a county as being either "urban," "semi-urban," or "rural" is based on information developed by the U.S. Bureau of the Census during an analysis of their decennial census data. Therefore, when a county is classified in 1970 based on the census description of the percent of its total population living in urban areas, the county maintains this classification until the next decennial census. Throughout the 1970's, the composition of the urban, semi-urban, and rural clusters of counties remained constant. But with the availability of the 1980 decennial census data, the urban character of each county was reassessed. Paralleling the general increase in the urban character of the nation between 1970 and 1980, the reclassification resulted in an increase in the number of urban counties and a decrease in the number of semi-urban and rural counties. With this redistribution of counties, it is inappropriate to compare the number of cases handled within each type of area over time without considering the changing compositions of the "type of area" groupings. (See "Type of Area" under "Definition of Terms" section.)

Table 4: ESTIMATED RATES OF DELINQUENCY CASES BY TYPE OF AREA AND MANNER OF HANDLING: 1983

| Type of Area | Manner of Petitioned | of Handling Nonpetitioned | Total |
|---------------------|----------------------|------------------------------|--------------|
| Urban | 22.4 | 24.8 | 47.2 |
| Semi-Urban Rural | 15.3 12.6 | 24.7 17.4 | 40.0 30.0 |
| Total | 19.5 | 24.0 | 43.5 |

^{1.} Rate is the number of delinquency cases per 1,000 children 10 through 17 years of age.

^{1.} Prior to 1974, no breakdown by manner of handling was reported.

METHODS

This section describes the data collection procedures, the sample, and the methods employed to develop national estimates of juvenile court activity found in this report.

DATA COLLECTION

Most data in this report were originally compiled by agencies responsible for the collection and dissemination of their state's juvenile court statistical information. Some individual jurisdictions were contacted when the state level system was either less complete or non-existent. Beginning with Juvenile Court Statistics: 1976-1978 an attempt was made to collect and report juvenile court activity on a county-bycounty basis. With the exceptions of Alaska, Connecticut, Florida, Puerto Rico, and the Virgin Islands, all data were reported in county units. Alaska reported the aggregated at the superior court level. Connecticut, which has a state level and a court system, reported data aggregated in juvenile venue districts. Floride 5 CE & were reported in the districts utilized by the Department of Health and Rehabilities & Services. Puerto Rico reported data aggregated at the district court level. The Virgin Islands reported the data in terms of the three major islands comprising the territory. Therefore, the level of data aggregation varied. However, for simplicity in this report, the term 'county' is used to identify the reporting unit, although the reader should be aware that in some instances this is an imprecise designation.

To document the volume of delinquency and dependency/neglect cases disposed, data forms and coding instructions were mailed to agencies in each of the 50 states (or individual jurisdictions), the District of Columbia, and the territories of Puerto Rico and the Virgin Islands. Since state juvenile codes do not contain uniform definitions of the terms "delinquency," "dependency/neglect," and "case", the coding instructions emphasized the need to provide statistics compatible with those HEW established and NCJJ maintains (see "Definition of Terms" section). The data form requested counts of the number of male and female delinquency and dependency/neglect cases disposed with and without the filing of a petition in each county (or reporting unit). Along with the completed forms, data were abstracted from statistical reports, and, in many instances, from data bases generated by automated juvenile court reporting systems.

THE SAMPLE

For the period of 1957 through 1969, national estimates of the number of children's cases disposed by courts with juvenile jurisdiction were based on information derived from a national sample of juvenile courts which was considered to be representative of the country as a whole. Since 1970, an attempt has been made to include all jurisdictions reporting juvenile court statistics in the national sample. At times, data available from some jurisdictions were not consistent with established definitions. For example, some counties supplied data on cases filed rather than cases disposed. Therefore, while these data are reported in the Appendix, they were not used to generate the national estimates.

To assist in verifying the reliability of the data, the National Center for Juvenile Justice implemented the following selection criteria for identifying data to be included in the national estimation sample. For a county to be included in the estimation sample, it had to report consecutively for two years and reflect no more than a 20 percent change in the reported number of cases disposed annually. If the data varied substantially between the two years, the particular data supplier was contacted to determine the cause of the variation. If the reporting procedure had been changed to incorporate a different unit of count, or if the large difference could not be explained, that county's data were excluded from the estimation sample. If the variation represented a true change in court workload, the county remained in the sample.

In 1983, 2,754 of a possible 3,096 counties (reporting units) in the nation provided data on delinquency cases. This data set represented approximately 90 percent of the nation's delinquency child population. However, due to reporting irregularities, data from only 1,480 counties could be used to generate national estimates of petitioned cases, and, similarly, 1,378 counties were used to produce estimates of nonpetitioned cases (see Tables 10A through 10C).

A total of 1,716 counties containing 63 percent of the nation's dependency/neglect child population reported information on dependency/neglect cases in 1983. Like the delinquency estimates, reporting irregularities permitted only 856 counties to be included in the petitioned sample of dependency/neglect cases and restricted the nonpetitioned sample to 610 (see Tables 11A through 11C).

THE ESTIMATION PROCEDURE

When NCJJ first assumed responsibility for producing the <u>Juvenile Court Statistics</u> report, national estimates on delinquency cases and dependency/neglect cases were derived in the manner HEW employed. In the course of compiling <u>Juvenile Court Statistics</u>: 1976-1978, however, minor changes were implemented to improve the estimating procedure. It should be noted that these changes do not significantly affect the comparability of this report with past issues. The changes and their rationale are as follows:

- 1. Traditionally, this report used as its reporting unit courts with juvenile jurisdiction. However, the number and geographical responsibility of courts change periodically as a result of legislation, causing problems for an estimation procedure based on year-to-year comparisons. In addition, other data bases (e.g., census population estimates) aggregate information at the county level. By aggregating data at the court level, the stability of county boundaries and the compatibility of the juvenile court information with other valuable data bases were lost. Therefore, beginning with Juvenile Court Statistics: 1976-1978, an attempt was made to collect and report juvenile court information on a county basis.
- 2. In the past, the total population of the court, as described in the most recent decennial census, was the basis for producing estimates and generating rates. Clearly, more current population figures would have been preferred for the yearly reports, but they were not available. In addition, it seemed quite reasonable that estimates of juvenile court activity should

^{1.} Child population figures were produced by the National Center for Juvenile Justice using population counts generated by the 1980 Decannial Census. The child population is defined as the number of children from age 0 to the upper age of jurisdiction.

be based on the total number of children within a given jurisdiction rather than the total population of the area. It is conceivable that two counties with the same total population but different demographic compositions could differ greatly in the size of their juvenile populations. Complicating the concept of juvenile population is the fact that states have varying upper ages of jurisdiction. (The upper age of jurisdiction for the states are shown in the Appendix.) Obviously, two counties with identical total populations and demographic compositions would be expected to have different levels of court activity if their upper ages of jurisdiction were different. Together, the impact of varying demographic compositions and upper ages of jurisdiction indicated that the use of child population was superior to the use of total population as a basis for estimation.

Therefore, the estimation procedure was altered to incorporate the child populations which fell under the jurisdiction of the juvenile court of each county. It was decided for delinquency estimates that child population would be defined as the number of children from 10 to the upper age of jurisdiction for each county for each year. For dependency/neglect cases, the child population was defined as the number of children below the upper age of jurisdiction for each county for each year. In summary, it is believed that child population provides a more accurate basis for estimating court activity than total population.

With the incorporation of the stated changes, the estimation procedure was as follows (refer to Tables 10A through 11C). Each county was placed into one of eight clusters defined by the total population for the year in question. Estimates of the total child population of the cluster and the total child population of the reporting jurisdictions within the cluster were developed. The total number of cases from the reporting counties was then multiplied by a factor equal to the total child population in the cluster divided by the child population of the reporting jurisdictions in the cluster to produce an estimate of the number of cases handled by the courts in the cluster. This process was applied separately to each of the four estimating samples (petitioned and nonpetitioned delinquency cases, and petitioned and nonpetitioned dependency/neglect cases).

Only five clusters were used in the nonpetitioned dependency/neglect estimation procedure due to the small number of counties reporting this information.

APPENDIX

REPORTED CASES IN CALENDAR YEAR 1983

Note: Footnotes appear in brackets and are listed at the end of the appendix.

APPENDIX FOOTNOTES

The footnotes associated with each data presentation identify (1) the <u>source</u> of the data, (2) the <u>mode</u> of transmission, and (3) the characteristics of <u>data</u> reported. State and local agencies responsible for the collection of their juvenile court statistics compiled the data found in this report.

Agencies transmitted these juvenile court caseload data to the National Center for Juvenile Justice in one of three different modes. First, many jurisdictions were able to provide the project with an automated data file which contained a detailed description of each case processed by their juve fourts. Next, some agencies completed a juvenile court statistics (JCS) survey provided by the project which requested for each county within the jurisdiction the number of male and female delinquency and dependency/neglect cases disposed with and without the filing of a petition. Finally, statistics for some jurisdictions were abstracted from their annual reports. In these instances, the name of the report and the page on which the information is found are listed.

The actual meaning of the statistics at times varied between jurisdictions. While many states reported their data using 'cases disposed' as the unit of count, there were others which reported 'youth referred', 'offenses referred', 'petitions filed', 'arraignment hearings held', or 'dispositions granted'. The unit(s) of count are identified in the footnotes for each data set. Clearly, the unit of count for each source must be reviewed before any attempt is made to compare data either across or within data sets.

The appendix presents information on the courts' delinquency and dependency/neglect workloads. While statistics found within these columns may differ in their units of count across jurisdictions, the figures within a column relate only to the specific case type. Some jurisdictions were unable to provide statistics which distinguish delinquency from dependency/neglect matters or at times even from other activities of the courts. Such information is presented in the appendix in a column labeled 'All Reported Cases'. By its nature, this column contains a heterogeneous mixture of units of count and case types. These variations are identified in the footnotes associated with each data presentation. In addition, due to the nature of these data, case rates would be meaningless and are, therefore, not calculated within the 'All Reported Cases' column.

[1] Variations in administrative practices, differences in upper ages of jurisdiction, and wide ranges in available community resources affect the number of cases handled by individual counties and states. Therefore, the data displayed in this table should not be used to make comparisons between the delinquency or dependency/neglect workloads of counties or states without carefully studying the definitions of the statistics presented.

Furthermore, caution must be taken when interpreting the case rates appearing at the end of each state table. Case rate is defined as the number of juvenile court cases per 1,000 children at risk in the reporting counties. For example, Cook County, Illinois was the only county in the state reporting statistics on nonpetitioned delinquency cases. The nonpetitioned delinquency case rate (4.34 cases/1,000 youth at risk) was generated from the total number of nonpetitioned delinquency cases Cook County reported (2,412) and the county's delinquency

child population (555,400). Therefore, the case rates appearing in the state tables should not be interpreted as the state's case rate unless all counties within that state reported.

[2] Except for the states of Alaska, Connecticut, and Florida and the territories of Puerto Rico and the Virgin Islands, reported data are aggregated at the county level. Counties serving total populations of 50,000 or more are listed separately. Caseload statistics for counties serving areas with total populations of less than 50,000 are combined for each state and are reported in aggregate.

[3] Alabama

Source: Alabama Department of Youth Services

Mode: JCS survey form

Data: 1. Delinquency figures are cases disposed and include violation of probation/aftercare cases.

2. Dependency/neglect figures are cases disposed and include special proceedings. These figures are an undercount of the actual number of cases handled due to incomplete reporting. The Department of Pensions and Security handles dependency/neglect cases and transmits the statistical data to the Department of Youth Services.

[4] Alaska

Source: Alaska Court System

Mode: 1983 Annual Report, page S-43

Data: 1. Total figures include delinquency, status, and dependency/neglect petitioned case dispositions by superior court for fiscal year 1983.

2. Juvenile court cases are processed at the superior court level.

[5] Arizona

Data:

Source: Supreme Court of Arizona

Mode: JCS survey form

1. Delinquency petitioned figures are dispositions, not cases disposed. (This means that more than one case can be disposed in one hearing, thus receiving only one disposition.) Delinquency nonpetitioned figures are cases disposed. Total delinquency figures are not shown because the units of count for petitioned and nonpetitioned figures are not the same.

2. Dependency/neglect petitioned figures are dispositions not cases disposed. (This means that more than one case can be disposed in one hearing, thus receiving only one disposition.) Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[6] Maricopa County, Arizona

Source: Maricopa County Juvenile Court (delinquency cases) and the Supreme Court of Arizona (dependency/neglect cases)

Mode: Automated data file (delinquency cases) and JCS survey form (dependency/neglect cases)

Data: 1. Delinquency figures are cases disposed.

2. Dependency/neglect figures are dispositions, not cases disposed. (This means that more than one case can be disposed in one hearing, thus receiving only one disposition.) Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[7] Arkansas

Source: Arkansas Department of Human Services, Division of Youth Services

Mode: JCS survey form

Data: 1. Delinquency figures are cases disposed.

2. Dependency/neglect figures are cases disposed.

[8] California

Source: Bureau of Criminal Statistics and Special Services (delinquency cases) and the Judicial Council of California (dependency/neglect cases)

Mode: Automated data file (delinquency cases) and the 1984 Annual Report, page 206 (dependency/neglect cases)

Data:
1. Delinquency figures are cases disposed. There is an undercount of nonpetitioned delinquency cases in Alameda, San Diego and Santa Clara counties. These counties have an information system which does not capture the number of subsequent nonpetitioned cases of juveniles already active in the court system; the figures for the remainder of the state include this data.

2. Dependency/neglect figures are cases disposed for fiscal year 1983. Total dependency/neglect figures are not known because nonpetition data were not reported.

[9] Los Angeles County, California

Source: Superior Court, Los Angeles County (petitioned delinquency cases), the Los Angeles County Probation Department (nonpetitioned delinquency cases), and the Judicial Council of California (dependency/neglect cases)

Mode: Superior Court, Los Angeles County Juvenile Court Coordinator's Yearly Workload Report 1983 (petitioned delinquency cases); the Los Angeles County Probation Department 1983 Annual Report to Judges, page 3 (nonpetitioned delinquency cases); and the Judicial Council of California 1984 Annual Report, page 206 (dependency/neglect cases)

1. Delinquency figures are cases disposed. The number of petitioned cases was determined by adding the number of "Minors Found Unfit," "Preadjudication Dismissals," "Petitions Found Not True" and "Disposition Hearings" from the Juvenile Court Coordinator's Yearly Workload Report. The number of nonpetitioned cases was calculated using figures from the 1983 Annual Report to Judges. Figures for "Closed After Investigation," "Informal Supervision," "Abeyance" and "Other" were summed. Nine percent of the total number of petition cases were refused and were actually handled informally. This figure was added to the calculated nonpetitioned cases to derive the total number of nonpetitioned cases.

2. Dependency/neglect figures are cases disposed for fiscal year 1983. Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[10] Colorado

Data:

Source: Colorado Judicial Department

Mode: JCS survey form

Data: 1. Delinquency figures are cases terminated during fiscal year 1983.

Total delinquency figures are not known because nonpetitioned data were not reported.

2. Dependency/neglect figures are cases terminated during fiscal year 1983. Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[11] Connecticut

Source: Chief Court Administrator's Office

Mode: Automated data file

Data: 1. Delinquency figures are cases disposed.

- 2. Dependency/neglect figures were not reported.
- 3. Connecticut does not have counties, therefore the data are reported by juvenile venue districts established by the state.

[12] Delaware

Source: Family Court of the State of Delaware Mode: 1983 Fiscal Year Annual Report, page 6

Data: 1. Delinquency figures are total "felony" and "misdemeanor"

delinquency cases filed (petitioned) during fiscal year 1983. Total delinquency figures are not known because nonpetitioned data were not

reported.

2. Dependency/neglect figures were not reported.

[13] District of Columbia

Source: District of Columbia Courts

Mode: JCS survey form

Data: 1. Delinquency figures are cases disposed.

2. Dependency/neglect figures are cases disposed.

[14] Florida

Source: Department of Health and Rehabilitative Services; Children, Youth and

Families Program Office

Mode: Automated data file

Data: 1. Delinquency figures are cases disposed.

- 2. Dependency/neglect figures are cases disposed.
- 3. Status offenses are considered to be dependency/neglect cases in Florida. However, for the purposes of this report, they are classified as delinquency cases.
- 4. The figures represent the number of cases closed by Intake during 1983 which captures only those disposed cases reported to the Department of Health and Rehabilitative Services by caseworkers correctly completing and submitting a "Client Information Form Dependency/Delinquency Intake." The Department of Health and Rehabilitative Services Intake Department, having a broad range of operations, reports information on other child care services not part of the typical juvenile court system. Therefore, the number of nonpetitioned cases may appear higher and fluctuate more than those reported by other information systems which report only juvenile court activity.
- 5. Florida reported its data by Department of Health and Rehabilitative Services (HRS) districts. Therefore, HRS districts were used as the reporting area. The following is a list of counties within HRS districts. District 1: Escambia, Okaloosa, Santa Rosa, and Walton. District 2: Bay, Calhoun, Franklin, Gadsden, Gulf, Holmes, Jackson, Jefferson, Leon, Liberty, Madison, Taylor, Wakulla, and Washington. District 3:

Alachua. Bradford, Citrus, Columbia, Dixie, Gilchrist, Hamilton. Hernando, Lafayette, Lake, Levy, Marion, Putnam, Sumter, Suwannee, and Union. District 4: Baker, Clay, Duval, Flagler, Nassau, St. Johns, District 5: Pasco and Pinellas. and Volusia. District 6: Hardee. Highlands, Hillsborough, Manatee, and Polk. District 7: Brevard. Orange, Osceola, and Seminole. District 8: Charlotte, Collier, De Soto, Glades, Hendry, Lee, and Sarasota. District 9: Indian River, Martin, Okeechobee, Palm Beach, and St. Lucie. District 10: Broward. District 11: Dade and Monroe.

[30] Massachusetts

Source: Office of the Commissioner of Probation

Mode: 1983 Annual Report of the Massachusetts Trial Courts, pages 60-61, 71-

74 and 152-153

Data: 1. Delinquency figures are juvenile arraignments. Total delinquency figures are not known because nonpetitioned data were not reported.

2. Dependency/neglect figures are the number of petitions disposed for fiscal year 1983 and include status offense petitions. Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[31] Michigan

Source: State Court Administrative Office

Mode: 1982-83 Report of the State Court Administrator, pages 17-22

Data:

1. Delinquency figures are new petitions authorized in fiscal year 1983. The figures for the following counties are incomplete: Alger, Charlevoix, Cheybogan, Crawford, Gratiot, Manistee, Montmorency, Ogemaw, Ottawa and Schoolcraft. Total delinquency figures are not known because nonpetitioned data were not reported.

2. Dependency/neglect figures are new petitions authorized in fiscal year 1983. They include supplemental petitions and petitions for rehearings for some courts. This accounts for the wide variation in the number of petitions authorized. The figures for the following counties are incomplete: those listed under delinquency and Clinton. Total dependency/neglect figures not known because nonpetitioned data were not reported.

[32] Mississippi

Source: Mississippi Department of Youth Services

Mode: Automated data file

Data: 1. Delinquency figures are cases disposed.

2. Dependency/neglect figures are cases disposed. Only those cases which came to the attention of the Department of Youth Services via court processing are included here. The majority of cases were handled through the Department of Public Welfare and did not come in contact with the juvenile court.

[33] Missouri

Mode: JCS survey form

Data:
1. Delinquency figures are petitioned hearings and total nonpetitioned cases disposed. They include traffic cases. Total delinquency figures are not known because the petitioned and nonpetitioned units of count are not the same.

2. Dependency/neglect figures are petitioned hearings and total nonpetitioned cases disposed and include status offense cases. Total dependency/neglect figures are not known because the petitioned and nonpetitioned units of count are not the same.

[38] New Mexico

Source: Administrative Office of the Courts

Mode: JCS survey form

Data: 1. Delinquency figures are cases disposed for fiscal year 1983.

2. Dependency/neglect figures were not reported.

[39] New York

Source: Office of Court Administration (petitioned delinquency and dependency/neglect cases) and the State of New York, Division of Probation (nonpetitioned delinquency cases)

Mode: Automated data file (petitioned delinquency and dependency/neglect cases) and JCS survey form (nonpetitioned delinquency cases)

Data: 1. Delinquency figures are cases disposed. They include PINS cases.

2. Dependency/neglect figures are cases disposed. Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[40] North Carolina

Source: Administrative Office of the Courts

Mode: North Carolina Courts 1982-1983 Annual Report, pages 140-143

Data: 1. Delinquency figures are "offenses and conditions alleged in juvenile petitions" during fiscal year 1983. Total delinquency figures are not known because nonpetitioned data were not reported.

2. Dependency/neglect figures are "offenses and conditions alleged in juvenile petitions" during fiscal year 1983. Total dependency/neglect figures are not known because nonpetitioned data were not reported.

[41] North Dakota

Source: Supreme Court, Office of State Court Administrator

Mode: Automated data file

Data: 1. Delinquency figures are cases disposed.

2. Dependency/neglect figures are cases disposed.

[42] Ohio

Source: Ohio Department of Youth Services

Mode: Ohio Juvenile Court Statistics 1983, pages 7-10

Data:
1. Delinquency figures are a count of youth petitioned to court. (A juvenile may be counted more than once if he/she is referred to court on more than one occasion during the year.) Total delinquency figures are not known because nonpetitioned data were not reported.

2. Dependency/neglect figures are charges disposed.

[43] Cuyahoga County, Ohio

Source: Cuyahoga County Juvenile Court (delinquency cases) and the Ohio Department of Youth Services (dependency/neglect cases)

Mode: Cuyahoga County Juvenile Court 1983 Annua! Report, pages 19-20 (delinquency cases) and Ohio Juvenile Court Statistics 1983, page 9 (dependency/neglect cases)

Data: 1. Delinquency figures are cases disposed. For both petitioned and nonpetitioned cases, the number of cases "Continued, or Set for Hearing in 1984" was subtracted from the total number of dispositions.

The number of nonpetitioned cases disposed was further determined by summing "Total Unofficial Dispositions" and "Cases Disposed of Without Official Court Action, 1983."

2. Dependency/neglect figures are charges disposed.

[44] Oregon

Source: Department of Human Resources, Children's Services Division
